

Original HL1 Hitchlock Instructions

Diagram

Maintenance

On a regular basis for optimum performance:

- Clean and lubricate moving parts.
We recommend using SAS Mint General Protectant Spray to lubricate the locks of all our products.

Spare Parts

Replacement Parts can be ordered at your local SAS dealer, or online at www.sasproducts.com

SAS Original Hitchlock HL1 Instructions

The Original Hitchlock is available in 2 different models to suit some braked and unbraked trailers. These instructions cover the HL1 which is mainly suited to trailers with braked hitches. If you have a tall single drawbar, or a stand under the hitch and drawbar and this is hindering this hitchlock from fitting you may need the HL2 model instead.

The hitchlock comprises of two main parts - the painted outer section, and the inner silver section.

To separate the two sections: -

1. Insert your radial tumbler key into the hitchlock lock at the top corner of the coloured outer section.
2. Turn the key 90 degrees to unlock, then slide the inner silver section out of the outer.

To fit onto hitch: -

1. The red label on the silver section has "HITCHED" and "UNHITCHED" on - one reading correctly and the other inverted. Slide the inner silver section over the hitch from one side, ensuring the red label reads correctly for depending whether you are fitting on a hitch that is hitched or unhitched to vehicle or other hitch point.
2. Now slide the coloured outer section over the inner silver section from the opposite side of the hitch. Insert the key and turn to unlock, to ensure that the two sections are full pushed together, then rotate key in the lock 90 degrees and remove key.
3. Ensure the inner section is locked into the outer.

IMPORTANT

1. It is imperative that the hitchlock is fitted correctly for effective protection.
2. Never move or drive vehicle with the hitch lock fitted.

About SAS

We understand the life of towing and what is important to you.

A caravan or a motorhome is more than a box on wheels – it is a home, a store of happy memories and a lifestyle. A trailer is more than just a transport device – it is still the most flexible means available to transport bulky items from A to B by yourself. We know the importance of the experiences you build in your caravan or the days you spend with your trailer behind you.

Unfortunately however, in today's world, crime and theft continue to increase. Over 4000 caravans are stolen in the UK each year*, and less than 3% are ever fully recovered**.

Our vision is to bring a stop to caravan and trailer theft with quality, reliable security solutions that deter criminals and prevent crime. We are on a mission to preserve your assets and memories and give you peace of mind.

Nothing speak of quality, reliability and peace of mind quite like a SAS CLAMP.

In over 30 years of speaking to owners of trailers and caravans, we have developed our solutions to fit your needs, and we are proud of the confidence placed in us by owners, insurers, quality controllers and our distribution network alike.

Visit the SAS website today to find other ways to SECURE YOUR WORLD.

* According to AA Caravan Insurance
